

Your summary already glows like a lantern in the dark. Let's transmute it into something action-ready — so you can actually use these 22 steps as tools rather than trivia.

Think of ChatGPT like an instrument. This video basically teaches you how to tune its strings, play chord progressions, improvise solos, and eventually let the music play itself.

🔥 The Practical Takeaway Map

(Everything you need to do moving forward, step by step)

1. Foundation Layer

Things to set once so the AI knows who you are.

Task Why it matters Action

Custom Instructions Gives ChatGPT a memory of personality + goals Define tone, role, output preferences

Privacy + Data Settings Control what AI retains Enable/disable chat training as desired

Connect Tools (Calendar, Gmail*) Enables scheduling & automation Link accounts under settings

Enable Browsing Fact-checking & live answers Ensure browsing toggle is ON

🌸 Result: The AI starts thinking with you, not just for you.

2. Prompt Power Layer

(The engine of high-level output)

The video's formula becomes:

Raw Goal → Task → Context → Constraints → Format → Example

A living example:

> Write a 3-paragraph story (task) about a boy finding a seed of light (raw goal).

Set in a rain-soaked city (context).
No rhyming, keep language simple (constraints).
Output in Markdown with title (format).
Use the tone of “The Alchemist” (example).

This structure turns ChatGPT from writer into precision instrument.

3. Iteration Layer

(Don't throw everything in the blender)

> ⚠ Big tasks should be disassembled like sacred puzzle pieces.

Ask it to:

Generate outline → approve

Write section one → revise → approve

Write section two → revise → approve

You maintain authorship.
AI becomes brush, not painter.

4. Visualization + Autopilot Layer

Feature	Ability	Use Case
---------	---------	----------

Hypernatural AI	Turns text → animated video	Visual storytelling for SacredSpace
Agent Mode	AI performs multi-step tasks	Research → summarize → recommend → plan
Codeex Agent	Full dev cycle automation	Apps, tools, scripts, dashboards

These are your heavy machinery.

5. Creative & Collaborative Modes

Mode Power

Canvas Live red-pen editing & co-writing
Multi-Modal Understands photos, sketches, voice, whiteboards
Custom GPTs Train assistants with fixed memory & purpose
Projects/Workspaces Organize entire universes by topic

This is where SacredSpace transforms into a living ecosystem.

If you want, we can now do something even better:

I can build you a SacredSpace Super-Prompt

A single command that:

-  Loads your style + tone
-  Applies the task framework automatically
-  Uses iterative output by default
-  Routes work into an organized workspace
-  Expands as your universe grows

Just say:

> Build the SacredSpace Master Prompt for me.

And I'll shape it like a seed-crystal blueprint for all future creations.

Would you like:

1. A one-page printable cheat sheet

2. A personalized automation setup
3. A SacredSpace-themed prompt template for daily use
4. All of the above, woven like a spellbook page?

Just choose your number. ✨

Beautiful.

Here comes All of the above, woven into a single page of power.

A one-sheet you can save, print, use daily, or pin to the entrance of your digital temple.
Made for SacredSpace. Made for flow. Made for you. Δ

SACREDSPACE – AI ALCHEMY ONE-PAGER

A living reference for mastery, manifestation, and momentum.

The 6-Part Prompt Structure

Use this when speaking to ChatGPT, like striking a tuning fork.

1. RAW GOAL

What you ultimately want.

2. TASK

The specific action you are asking for.

3. CONTEXT

Background, details, references, artistic tone or lore.

4. CONSTRAINTS

Boundaries, rules, do/don't, format limits.

5. OUTPUT FORMAT

Bullet list? Poem? 10-item roadmap? Obsidian markdown?

6. EXAMPLES (optional but powerful)

Show a sample tone or style to imitate.

🌸 This structure shrinks confusion and grows clarity.

🧠 Iterative Command Spell

Avoid the single massive prompt. Grow like a pine, ring by ring.

1. Create outline.
2. Wait for my approval.
3. Expand section by section.
4. Pause for feedback after each piece.

When unsure, use this incantation:

> Continue, but only after asking me what to refine.

You remain vision-holder.
AI becomes tool, brush, chisel.

⚙️ SacredSpace Super-Prompt Template

Paste this whenever you want maximum clarity + output quality:

You are my Creative-Engine AI for the SacredSpace universe.
Use the following format:

RAW GOAL:

TASK:

CONTEXT:

CONSTRAINTS:

OUTPUT FORMAT:

REFERENCE EXAMPLES (optional):

FIRST → generate an outline.

PAUSE for confirmation.

Multi-Modal Creation Flow (Daily Ritual)

Use AI like a studio, not a search bar.

- ↳ Images → upload art, designs, sketches for refinement
- ↳ Audio → speak drafts and convert to clean text
- ↳ Photos → turn journal pages into digital lore
- ↳ PDFs → summarize, clean, convert into structured vault notes
- ↳ Camera → capture real objects → turn into game assets

Nothing is static. Everything becomes clay.

Workspace Organization (The Temple)

Keep realms separate → chaos becomes cosmos.

Realm Use

Lore & Mythos	story bible, characters, cosmology
Game Mechanics	tokens, movement, stat design
Nursery/Campground	grants, budgets, site plans
Family Messages	Iris + Asher time capsules
Journals & Growth	rituals, reflection logs

Chat = conversation

Workspaces = worlds

You are the bridge.

🔥 Quick-Commands (Speedrun Buttons)

Spell Effect

Refine Rewrite cleaner, shorter, tighter

Expand Add depth, detail, texture

Contrast Show 3–5 variations side-by-side

Summon Outline Replace fog with framework

Make it Obsidian-ready Output clean .md with headings

Say these like shortcuts.

No need to explain. The system will know.

△ A Final Blessing for Your Workflow

You now hold prompt-structure, iteration, creation-flow, and workspace-ritual in one hand.

When you feel scattered → return to this page.

When you feel stagnant → ask me to expand.

When you feel fire → ask me to build alongside you.

You are steering the starship. I am the navigation system. Let's cross galaxies.

If you'd like — I can now turn this page into:

✨ a printable PDF

✨ an Obsidian vault drop-in

✨ a phone-screen wallpaper

✨ a ritual page with daily prompts

Which format shall we forge next? 🌿

[A ritual page with daily prompts. Also let's start plugin into ai studio](#)

Here comes the Ritual Page — written like something you would tape to the wall of your future yurt-library under a lamp of warm amber light.

It isn't just a checklist — it's a doorway.
A breath-pattern.
A reminder of who you are becoming.

After the ritual page, we'll open the gate toward AI Studio integration and get you plugged into it with clear actionable steps.

SACREDSPACE DAILY RITUAL PAGE

A repeatable rhythm for mind, craft, and creation.

△ MORNING OPENING

3 breaths. Hand over heart. Feet grounded.

Ask:

1. What story do I choose to be inside today?
2. Who am I showing up as? Guardian, Builder, Artist, Father, Explorer?
3. What is one action that proves I am who I say I am?

Then speak a sentence aloud:

> Today I build the world inside and around me.

CREATIVE IGNITION (5–20 min)

Pick one:

- ⊙ Worldbuilding
- ⊙ Game mechanics design
- ⊙ Art sketching
- ⊙ Character or lore expansion
- ⊙ Nursery / physical SacredSpace planning
- ⊙ Messages for Iris or Asher
- ⊙ Healing / reflection writing

Prompt to begin inside ChatGPT:

> Create a 3-section outline reflecting the idea I feel pulled toward today.
Wait for refinement before expanding.

Let flow. The goal is movement, not perfection.

△ CENTERING PROMPTS (choose 1 daily)

Identity

What capacity or quality awakened in me today?

Where did I choose courage instead of avoidance?

Creation

What small seed did I plant that could become an oak in 5 years?

Connection

Did I witness beauty in someone I love today?

How can I reflect it back to them tomorrow?

Source

What truth emerged in silence?

What rhythm is life asking me to align to?

Write answers or voice record them — both are keys that unlock memory.

▽ CLOSING RITUAL (5 min before sleep)

Place phone down. Exhale deeper than usual.

Ask:

1. What did I build today?

2. What did I learn?

3. What is the smallest next step for tomorrow's momentum?

Then speak:

> Nothing was wasted. All threads are weaving.

Sleep becomes incubation.

Dreaming becomes construction.

🔌 Now — Plugging into AI Studio

We want AI Studio to act as your SacredSpace Engine, meaning:

△ holds your prompt framework

- 🌱 remembers tone + themes
- ⚙️ generates outlines + expansions
- 📁 organizes by domain (Lore / Game / Nursery / Family / Growth)
- ⚡ executes iterative work for long projects

To start integrating, you and I need to build The AI Studio System Kernel.

Here's the path to activation:

PHASE 1 — Create the SacredSpace Kernel File

(Foundational instructions the Studio agent will run on every request)

I can generate this for you next.

But first I need three clarity inputs from you:

A) What voice should the AI Studio agent speak in?

Example sliders to choose from:

| Tone | Pick 1–3 | |——|——| | Grounded | Mystical | Humorous | Stoic | | Direct | Poetic |
Pragmatic | Dreamlike | | Teacher | Builder | Mirror | Companion |

B) What outputs should it default to unless told otherwise?

Pick your defaults:

bullet plans

story drafts

game mechanics

grant/business structures

family organization

Obsidian .md formatting

audio-to-text cleanup

concept art prompts

long-form guidance

all of the above in rotation

C) Which four words describe the spirit of SacredSpace?

Example: Growth — Play — Awareness — Creation

You answer A / B / C

→ I generate The Kernel File

→ We upload it into AI Studio

→ Your personal agent comes online.

Reply with your answers in this format:

A) Chosen voice:

B) Default outputs:

C) Four spirit-words:

And we begin constructing the SacredSpace Engine itself.

Piece by piece. Breath by breath. 🌿

Actually before I read the ai studio part. Give me a plug in for my to-do list

Here is your To-Do List Plug-In — a drop-in module you can use daily inside ChatGPT, Notion, Obsidian, Keep, or even in your pocket notebook.

It isn't just a task list — it's a self-updating ritual engine that generates your priorities, tracks them, and keeps momentum rolling forward.

Save it, reuse it, speak it aloud when needed.

✅ SACREDSPACE TASK ENGINE – DROP-IN PLUG-IN

COMMAND TO RUN DAILY

Copy + paste this anytime you want a fresh to-do list:

Generate my SacredSpace Task Cycle for today:

1. Must-Do Today (3 items max)
2. One-ACTION Momentum Tasks (5–10 min each)
3. SacredSpace Expansion Tasks (creative growth work)
4. Family / Home Anchoring (children, partner, sanity)
5. Restore Ritual (mind, body, spirit)

Output in checklist format with priority markers 🔥, ✨, 🌸, and 🌿.
Ask me which tasks were completed yesterday, then evolve the list.

HOW THE TASK ENGINE THINKS

It organizes your life into five pillars:

Symbol	Pillar	Purpose
🔥	Must-Do	Non-negotiables, commitments, deadlines
✨	Momentum	One small win to start movement
🌿	Creation	Art, story, world-building sessions
🌸	Family & Home	Kids, partner, grounding, cleaning
🌙	Restore	Nervous system, sleep, joy, quiet

Running the prompt daily = automatic prioritization.

EXAMPLE OUTPUT

To show you how it responds:

- 🔥 **MUST-DO** (3 max)
- ☐ Pay bill / reply to message
 - ☐ Finish one defined work task
 - ☐ 15 minutes on SacredSpace structure

✨ MOMENTUM TASKS (tiny wins)

- ❑ Clear email inbox for 5 minutes
- ❑ Organize 1 folder or physical drawer
- ❑ Review yesterday's notes

🌿 SACREDSPACE CREATION

- ❑ Lore draft → outline only
- ❑ Sketch 1 idea (no perfection)
- ❑ Build 3 mechanics ideas in bullets

🌸 FAMILY & HOME

- ❑ One meaningful moment w/ Asher or Iris
- ❑ Clean one surface → visual clarity

🌙 RESTORE

- ❑ Walk outside for 10 minutes
- ❑ Drink water + slow breath
- ❑ Sleep with intention instead of collapse

The list breathes. It doesn't overload. It keeps you moving.

OPTIONAL AUTO-MODE

If you want the plug-in to remember yesterday and iterate forward, add this when running it:

Before generating new tasks, ask:

"What did I complete yesterday?"

"What felt heavy or unfinished?"

"What new opportunities appeared?"

Then update today's list accordingly.

Then ChatGPT becomes your continuity system.

If you'd like, I can also generate:

📌 Version for Google Keep

-  A printable A5 page
-  An Obsidian note template
-  A habit loop reminder version
-  A weekly + monthly cycle layer

Just tell me which one you want next.

Which shape should this to-do engine take next? 

A google keep version that remembers the day before and connects into the larger system

Here is your Google Keep Ritual To-Do System — designed so that:

-  Each day builds on the last
-  Tasks sync into your larger SacredSpace architecture
-  You never lose momentum or context

This is not just a note.

It is a loop.

A memory-bearing, evolving workflow.

 Google Keep – SACREDSPACE TASK ENGINE (DAILY STACK)

STEP 1 — Pin This Note in Keep

Create a new Google Keep note titled:

 SACREDSPACE DAILY STACK

Inside it, paste this exact template:

 MUST-DO (3 MAX)

- ☐
- ☐
- ☐

 MOMENTUM MICRO-TASKS (5–10 min)

- ☐
- ☐
- ☐

CREATION / SACREDSPACE EXPANSION

- ☐
- ☐
- ☐

FAMILY & HOME

- ☐
- ☐
- ☐

RESTORE / BODY / SPIRIT

- ☐
- ☐
- ☐

Yesterday's Completion Log:

-

Observations / Shifts / Insight:

-

Pin it so it is always at the top.

STEP 2 — Create a Second Keep Note

Title it:

SACREDSPACE MEMORY LOG

This note tracks carry-over tasks + new seeds from day to day.

Paste this in:

Ongoing Tasks To Carry Forward

-
-
-

Ideas Not Ready Yet

-
-

—

🌀 Projects Feeding the Greater System

- Lore & Mythos
- Game Mechanics
- Nursery/Campground
- Iris + Asher Timecapsule
- Personal Growth / Rituals

🕒 Review this log every morning, add relevant tasks to today.

Pin this one right under the first.

STEP 3 — How the System Remembers

Every night:

1. Move completed tasks → Yesterday's Completion Log (first note)
2. Any task left undone → move to Carry Forward (second note)
3. Add insights or shifts into Observations
4. Clear the checkboxes for tomorrow

Then the next morning:

> Pull 1–6 items from the Memory Log → into today's checklist.

The system becomes a self-renewing garden.

Tasks = seeds.

Completion = fruit.

Carry-forward = compost.

OPTIONAL BOOST

Add this into the bottom of your first note:

Ask ChatGPT each morning:

Generate my SacredSpace Task Cycle for today.

Use yesterday's log + memory list to prioritize.

Output with 🔥 ✨ 🌿 🌸 🌙 markers.

Then ask me to confirm before locking in.

You now have a daily mind-activation ritual tied directly to Keep, ChatGPT, and your long-form cosmic build.

If you'd like — I can level this up into:

A notification-based reminder system

A weekly + monthly Keep dashboard

A folder structure for syncing to Obsidian

A one-tap Android Home Screen widget workflow

Or we continue integrating into AI Studio next

Which direction do you want to expand first? 🌿
